

10/12 8:40 AM

Yesterday: Finish shell scripts for CS class.

Caught up on stats reading / took notes
Held extra office hours

Today: Brain storm ideas for homework for Info 393
Document homework for CS to turn in
Staff meeting for 201

Goals: * Get an idea of what you want for your portfolio

~12:48: Look at some web dev portfolio for inspiration

- hero page with my photos?
- FIXED NAV BAR → carousel for image
- portfolio for project (dev) and photography
- get social icons... → pop-up cards for project snippet
- medium article on 12 web portfolios by Aleks Polchenko
- keep it simple / calm color palette → need to look at more for inspiration

★ — Start on sketching design when home

~3:41: After lecture check-in

- Ask about relatively question student had in OA
- practice on own
- prep for staff meeting
- read packet guide
- finish CS documentation / turn in!!
- start reading stat for 4mn lecture?

~8:00 After Dinner Check-In

- Turn in Scripts / practice w/ own
- Start sketching? / continue brainstorming

More ideas I like:

- research nice icons
- progress bar? + use bootstrap? look more area aside from class
- blue/gray/yellow color palette
- create img of yourself as "profile picture" → may be hard not worth

~ 1:12 : Before Bed:

- got some prototypes on sketch galaxy but looks ugly
- can't decide on colors... lol or fonts...

10/12 : 11:10 :

Yesterday: Stayed up way too late to finish sketch/need to get feedback
finished CS homework

Had staff meeting / cleared up some confusion regarding

'Second' monitor came/set up completely! need holder for usb-c

Today: Missed section

Dream Project Meeting

Read/Notes for Stats

Finished design + pick color palette/fonts

Goal: Get a good chunk of portfolio done... busy weekend (also start staff carbar)

~ 4:51 : Haven't gotten chance to work on portfolio → try to see if can be done

- add filter option for projects and photos w/o JS

- got icons from Kameleon, need to change colors to fit them → need to get license right

~ 12:30 : After get together w/ friends

- need to finish prototype design w/ feedback

~ 1:26 : Finished design (got homework approval)

- start pushing template to github + pick color palette/fonts

- start file structure for portfolio

Railway > Robots

10/14 10:57 Implementation Day

Yesterday: Meetings

Finalized design/have good foundation on what to do

Today: Take notes for starts??

All day to work on implementation of portfolio designs

Goals: Finish About page ... if can do more then do so

Potential Problems -

- technical skill set progress bar? alignment is gonna suck

- filtering option for project and photography? - Category list if JS is altered

Steps to approach? * for home/about page

X. get all content on HTML (no style) finish @ 2:37

X. work on navbar (hamburger as well) @ 3:50 Issue with hamburger

X. landing page / header styling @ 4:17

X. Who am I? (hard alignment maybe?) @ 4:40 ✓ kinda @ 11:31

X. What can I do? (with progress bar will suck, maybe draw some icons?)

X. Canvas section (easy if we grid system) @ 11:01

X. Footer (have icons link to account) @ 11:17

navbar toggle won't show up --

- tried changing CSS w/ !important

- used EXACT!! code on bootstrap documentation (still not working)

- make separate project to debug and understand navbar (works)

↳ tried integrating into my project and still doesn't work lol

* hamburger shows up but

~~X~~ Solved: forgot to add js file from bootstrap .

Landing page alignment issue (small) :

- inspect element

Icon alignment on different device size ✓
- Inspector tool, small alignment ruler add

Progress bar (how to?) * harder than I thought

- tried SVG rect w/ fill
- bootstrap progress bars? maybe? movement (attempt to use divs w/ background color)

* Divs work but alignment on page still very off

- put text and bar separate in different grids
- issues isn't fixed on all screens (works kinda)

✓ - fixed by testing in Inspector tool for small screen

- worked up words

Courses rectangle: ✓

- easy alignment
- tricky to resize if text wrap so rectangle doesn't look cramped

centering social icons inside circles:

- added padding/need to learn why
- Fixed for resizing icons too

white space between nav bar and landing:

- stuck over plan
- fixed margin for nav

→ Start 5hr earlier

10/15 9:08

Yesterday: Finished About Page!! Almost Done?

Today: grocery shopping/mgmt prep

Finish portfolio

Make slides for lab/dream project

Take notes for our lecture for starts

Goal: Finish portfolio and maybe go for stretch goal of adding animation

Potential Problems?

- how to get filter to work? ✓ use JS to loop through all divs to change display
- focus on image when hover? many possible ways ← add opacity/default/has
- bring up an overlay on image? → W3S had easy example

→ break

Steps:

1. Container for filter option @ 12:40 fixed pictures solution to use buttons
2. Align gallery / contents @ 5:13
3. Extra features (filter, focus, overlay) @ 8:40

Navbar not working on other screens

- ✗ - doesn't look the same, everything aligns to the left
Solved cause I missed a link again to Bootstrap

gallery alignment:

- easy if used good system

- ✗ Need to add a way to exit overlay
✗ add more in my summary

10/16 9:28

Yesterday: Finish notes for stats
Finished almost all of portfolio (take last day to process)
Need to finish modal prop

Today: Start stats homework / Study for mid-term
Turn in portfolio
Finished 201 slides for other TAs

Goals: Turn in portfolio

~7:30 After class update

- need to add modal overlay ~~I~~ finish overlay usng example from W75

~10:47

Add summary and cleaned up code. Looks good aside from the other features I wanted to add.
